

Your Generosity At Work

Your gifts to the Ted and Sue Getterman Sports and Orthopedic Center at Baylor Scott & White Medical Center - Hillcrest are supporting the delivery of quality care to patients using advanced equipment and technologies. This four story, 106,000 square-foot facility is a direct result of your compassion and generosity. We are pleased to show how your investment has enhanced treatment for both our patients and staff, providing better care under one roof.

Highlights

1,600+
outpatient procedures
performed

31,000+
clinic patients served

Less than two weeks after opening, state-issued COVID-19 orders caused the new Orthopedic Center to temporarily close. However, even in the midst of a global pandemic, the facility experienced tremendous success. The team safely increased patient volume thanks to the new space and abundance of equipment. Therapists and physicians were able to continue treatment while still following all COVID-19 protocols of masking and social distancing.

The facility saw an **11.3%** increase in services, as well as new patient visits, despite being shut down during the COVID-19 pandemic.

Top 3 Procedures Performed

Arthroplasty knee surgery

Arthroplasty hand and wrist surgery

Arthroplasty shoulder surgery

"I could not have asked for a better experience! The doctors and staff are second to none—they provide compassionate care, pray with patients before surgery, and follow up with patients during recovery, even on their days off. Thank you to all of the donors who helped make this a caring place that serves the community well."

Lieutenant Mike Garrett,
knee replacement patient

New Features

Doubled the amount of exam rooms, added procedure rooms, and an additional x-ray room.

Outpatient Surgery afforded patients the comfort of having surgery without entering the hospital during the pandemic.

Additional expertise with a new total joint specialist, hand and wrist fellow, and additional physical therapy staff.

Audio/Visual equipment live streams from operating rooms to classrooms for surgical viewing and teaching to medical students.

Equipment for Advanced Therapy

Anti-Gravity Treadmill empowers patients to move in new ways and without pain – to recover mobility, improve wellness, and enhance physical performance.

Blood Flow Restriction equipment reduces the overall stress on the injured limb, enabling patients to make greater strength gains while lifting lighter loads.

Specialized equipment allows advanced imaging and real-time viewing of images.

3D Resistance offers an intelligent resistance-based workout that can analyze sports movements, identify imbalances, and draw performance comparisons.

Space

- ▶ Having multiple services available in one building – from physician offices and physical rehabilitation, to imaging and surgery – is not only convenient for patients, but also helped keep them safe during the COVID-19 pandemic. Exposure to the virus was limited, and outpatient services and surgeries were able to continue after a short period.
- ▶ The new outdoor performance area with astro turf has allowed therapists the ability to analyze the movement of athletes of all ages to improve strength, conditioning and performance with a focus on safety.
- ▶ The larger space has also allowed physicians to be able to perform in-office procedures in the new exam rooms.
